

Bag Twelve Grocery Items SOP (1x Episode: 12 groceries)

Bag twelve grocery items out of two labeled source crates into two bags, loading the non-fragile groceries first and the fragile ones on top, using a two-arm robot system. **One episode bags all twelve groceries.** The episode ends with every grocery in its bag and both crates empty. The bags are not folded, closed, or moved — they stay standing open where they were packed.

Crate 1 packs into Bag A and Crate 2 packs into Bag B. A grocery never crosses between crates or bags, so no destination is ever chosen — only the order items are loaded in.

Both bags begin open and upright in their own marked positions and never move. Groceries go in **one at a time**: fill Bag A completely from Crate 1 and check it, then do the same for Bag B from Crate 2.

Both bags stand in the middle of the table with a crate outside each one. **Each arm lifts groceries from the crate on its own side, and the opposite arm holds the bag open.** So Bag A is loaded by the left gripper out of Crate 1 and held by the right gripper, and Bag B is loaded by the right gripper out of Crate 2 and held by the left gripper.

Each crate holds **six** approved groceries — four non-fragile and two fragile — for twelve in the session. The session manifest records the handling class and handling attributes of every item and the six-item count per crate.

Groceries are identified **only by their crate and lane** — never by product. The setup crew assigns every item its handling class before recording, so no call is made mid-episode about what an item is or how much load it can take: load from the lane the step names, in the crate the step names.

Setup

Go through both checklists before starting the episode.

Cell configuration

- **Environment camera:** 900 mm.
- **cell_type:** bimanual
- **parked_side:** none

Hardware checklist

- Cameras are on and recording
- Env camera frame includes both crate openings and labels, both bag positions and mouths, and both grippers

- Both arms are at the home position with grippers open
- Table surface is clean, dry, stable, and clear of unrelated objects
- Both crates and both bags are stable and fully reachable
- Each crate and the bag beside it are reachable by that side's loading arm, and each bag is reachable by the opposite arm for holding

Materials checklist

- Bag A stands open, empty, and upright in its marked center-left position; Bag B stands open, empty, and upright in its marked center-right position
- Each bag holds its own shape open without support and stands clear of its crate and the other bag
- Crate 1 sits on the left of the table and Crate 2 on the right, outside the two bags, both open, stable, and visibly labeled
- Crate 1 holds only the Bag A groceries; Crate 2 holds only the Bag B groceries
- Inside each crate, groceries are grouped into two marked lanes — non-fragile and fragile — running front to back
- Each crate holds exactly six groceries: four in the non-fragile lane and two in the fragile lane, for twelve in the session
- The session manifest lists all twelve groceries, each item's handling class and handling attributes, and the six-item count per crate
- Each grocery sits in the orientation it will be packed in, on its widest flat face where it has one, without touching another grocery
- Every item is within the tested gripper payload and size limits and fits through the crate and bag openings
- Each bag can hold its crate's six groceries with the contents sitting below the bag rim, and its two fragile items fit side by side in one layer
- All packages are closed, dry, undamaged, and free from leaks
- Produce is clean, dry, sound, and free from loose dirt
- No item is hot, open, leaking, sharp, hazardous, contaminated, excessively fragile, or ambiguous

Workspace layout

- **Left side:** Crate 1, the Bag A source
- **Center-left:** Bag A, open and upright, beside Crate 1
- **Center-right:** Bag B, open and upright, beside Crate 2
- **Right side:** Crate 2, the Bag B source

Each bag sits directly beside its own crate, so every loaded move is short and stays on that arm's own side of the table. Neither bag ever leaves its marked position. The visible crate label

determines which bag its groceries belong to, and crate position is only a supporting cue.

Arm assignments

Each arm loads from the crate on its own side; the opposite arm holds the bag.

- **Bag A:** the **left gripper** lifts groceries from Crate 1 and lowers them into Bag A. The **right gripper** holds Bag A open and steady.
- **Bag B:** the **right gripper** lifts groceries from Crate 2 and lowers them into Bag B. The **left gripper** holds Bag B open and steady.

Each loading arm stays on its own side of the table, so no loaded grocery crosses the workspace. The holding arm reaches in from the opposite side, so the two arms approach the bag mouth from opposite directions and never contest the same space. The holding gripper never lifts a grocery.

Setup crew sorting rule

Sort the twelve groceries off camera by structure, not by product name:

1. **Non-fragile lane:** four items per crate that hold their shape under the weight of the rest of the bag.
2. **Fragile lane:** two items per crate that crush, bruise, crack, or deform under load and can carry no weight.

Keep this classification and the four-plus-two lane counts fixed across episodes. Confirm that each crate's fragile pair fits side by side in one bag layer and that every item is within the validated one-gripper limit.

Item pool by grocery category

Source items by category; assign lanes by the sorting rule above. **The two do not line up** — a category spans both lanes. Potatoes and tomatoes are both vegetables and sit in opposite lanes. The lane tag after each item is what decides where it stages.

- **Vegetables:** netted potatoes or onions, loose potatoes, carrots, peppers (non-fragile) · tomatoes, broccoli, leafy greens, herbs (fragile)
- **Fruit:** bagged apples or oranges (non-fragile) · bananas, berry punnets, soft stone fruit (fragile)
- **Dairy and chilled:** full milk carton or jug, yoghurt multipack, butter, cheese block (non-fragile) · eggs, single thin-walled yoghurt cups (fragile)
- **Dry goods:** rice, flour, or sugar bags, cereal, pasta, and cracker boxes (non-fragile)
- **Canned and jarred:** large cans, glass sauce jars, small tins (non-fragile)
- **Drinks:** large bottles, juice cartons, small cartons (non-fragile)
- **Bakery and snacks:** bread, buns, pastries, chip bags (fragile)

Two patterns run through the whole pool, and they matter more than the category names:

- **Netted or bagged multiples hold shape; the same produce loose still does, but it rolls.**
A net bag of potatoes is a dense block. Three loose potatoes are non-fragile but need seating flat.
- **Packaging outranks contents.** A yoghurt multipack is a rigid brick; a single cup of the same yoghurt collapses under a fingertip and belongs in the fragile lane.

Starting item set

Collect the first sessions with this set. It fills every lane position and covers the shapes the task has to handle: a rigid handled container, a glass jar, a deforming sealed bag, a flat box, a hinged carton, and loose produce.

Crate	Lane	Item type	Bag
1	Non-fragile	Sealed full milk carton	A
1	Non-fragile	Glass sauce jar, lid on	A
1	Non-fragile	Cereal box	A
1	Non-fragile	Sealed yoghurt multipack	A
1	Fragile	Egg carton	A
1	Fragile	Tomato punnet	A
2	Non-fragile	Sealed rice or flour bag	B
2	Non-fragile	Net bag of onions	B
2	Non-fragile	Large can	B
2	Non-fragile	Flat pasta or cracker box	B
2	Fragile	Bread loaf	B
2	Fragile	Broccoli crown	B

Two constraints this set is built around:

- **Each crate's non-fragile lane has to build a level platform for its fragile pair**, so at least one wide flat box per crate. A crate of only bottles and jars leaves the bread and broccoli without a platform.
- **Onions and potatoes sit in the non-fragile lane.** A net bag of them is dense and holds shape under load; only the crushable, bruising produce goes in the fragile lane.

Substituting an item

Swap like for like: replace an item with one that passes the same lane's test in the sorting rule, and keep the four non-fragile and two fragile counts per crate unchanged. A net bag of Irish potatoes is the direct drop-in for any non-fragile produce item; to stage potatoes and onions together, take the large can out and accept that the set loses its rigid-cylinder grasp. Never move a fragile item into the non-fragile lane to fill a gap — an item packed below its class goes under load it cannot take. Re-run the fragile-pair fit check after any swap.

Vocabulary

These are the terms used in this SOP. Annotators must use this language consistently. One term per concept, used throughout.

Handling classes

Handling class decides **where in the bag** an item goes. It is assigned by the setup crew before recording and recorded on the manifest, so nothing is judged mid-episode.

- **Non-fragile grocery:** an item that holds its shape under the weight of the rest of the bag. Examples include sealed bottles and cartons, cans, glass jars, sealed bags of rice, flour, or sugar, boxed dry goods, sealed multipacks, firm sealed tubs, and firm or netted vegetables.
- **Fragile grocery:** an item that crushes, bruises, cracks, or deforms under load and can carry no weight. Examples include eggs, bread and bakery items, snack bags, soft fruit, soft-skinned vegetables, leafy greens and florets, and single thin-walled cups.
- **Handling attributes:** manifest notes such as crushable, leak-prone, keep upright, rollable, or flexible that change how an item is grasped and released, not which layer it enters.
- **Crushable grocery:** an item damaged by grip force or by load placed on it.
- **Leak-prone grocery:** a closed container that must stay upright to protect its cap, lid, or seal.
- **Approved grocery:** an item accepted for the session because its handling class is unambiguous, its package or surface is safe and intact, and its mass and dimensions are within the tested robot, crate, and bag limits.
- **Session manifest:** the setup record listing all twelve items, each item's handling class and handling attributes, and the six-item count in each crate.

Bag and crate components

- **Crate 1 / Crate 2:** the two source crates, emptied in that order. Crate 1 packs into Bag A; Crate 2 packs into Bag B. Each holds six groceries.
- **Lane:** one of the two marked areas inside a crate holding that crate's four non-fragile or two fragile groceries.
- **Bag A / Bag B:** the two bags, packed in that order. Each takes six groceries.

- **Active bag:** the bag currently being packed. The other bag is left untouched until its turn.
- **Bag mouth:** the top opening through which groceries are loaded.
- **Non-fragile layer:** all four of a bag's non-fragile groceries, resting on the bag base.
- **Fragile layer:** both of a bag's fragile groceries, resting side by side on top of the non-fragile layer with nothing above them.
- **Rim clearance:** the packed contents sit below the bag rim, with no item protruding above it or leaning on it.

Actions

- **Stabilize:** hold the active bag by a clear upper edge, handle, or side so it stays upright and open throughout loading.
- **Select:** choose the next grocery from the lane the current layer calls for.
- **Lift:** grasp one grocery and raise it clear of the crate without catching another item.
- **Place:** lower the grocery through the bag mouth onto the current layer and release it only once it is supported.
- **Seat:** settle an item flat so it does not rock, stand on edge, or press the bag wall outward.

Handling standard

- Move exactly one grocery per pick. Lift it clear of the crate, carry it level, lower it into the bag, and release only once it is supported.
- Grip fragile and crushable groceries lightly. Never squeeze one to hold a slipping grasp — set it back down in its lane, release, and regrasp.
- Do not rotate a grocery in the air. If an item needs a different orientation, set it flat in its lane, release, regrasp, and lift again.
- Keep leak-prone groceries upright from lift through release.
- Never drag a grocery across the crate or force one past an item already in the bag.

Steps

Fill Bag A completely before touching Crate 2 or Bag B. Step 1 packs one bag, Step 2 packs the other, and Step 3 ends the episode. Within a bag, load the whole non-fragile layer first, then the fragile layer on top of it. All twelve groceries are bagged inside this one episode.

Each step ends with a **Check** — the state the workspace has to be in before moving on. It is something already visible in the workspace, not a separate inspection action.

Step 1: Pack the Crate 1 groceries into Bag A

Goal: all six groceries in Crate 1 are moved one at a time into Bag A, the four non-fragile first and the two fragile on top.

- With the **right gripper**, hold Bag A open at a clear upper edge, handle, or side, reaching in from the right.
- Keep that hold from the first pick until the last grocery is supported, reopening or restabilizing the bag whenever it starts to close or lean.
- Keep the right gripper clear of the bag mouth so the left gripper has an open loading path.

1.1 Select the next grocery

- Work one layer at a time: empty the **non-fragile lane** first, then the **fragile lane**.
- Select one accessible grocery from the current lane without digging under, trapping, or lifting another item.
- Take groceries only from Crate 1. Do not reach into Crate 2 or touch Bag B.
- Confirm the item's handling attributes on the manifest before grasping.

1.2 Grasp and lift the grocery

- With the **left gripper**, grasp a secure part of the grocery body.
- Do not grasp a cap, lid, seal, thin film, unsupported package corner, or produce stem.
- Use the minimum force needed to hold the item securely.
- If the grasp is unstable, return the item to its lane and perform one deliberate re-grasp.

1.3 Place the grocery in Bag A

- Carry the grocery level along a clear path to the bag mouth.
- Lower it into the bag onto the current layer — non-fragile groceries onto the bag base or onto the non-fragile items already there, fragile groceries side by side on top of the non-fragile layer.

1.4 Complete each layer before the next

- Repeat Steps 1.1 through 1.3 for one grocery at a time until the current lane is empty.
- **Non-fragile layer check:** all four non-fragile groceries sit flat and stay still, none standing on edge or pressing the bag wall outward, and the layer is level enough to carry the fragile items.
- **Fragile layer check:** both fragile groceries are undeformed, side by side rather than stacked, free of pressure from the bag wall, with nothing above them.
- Reseat one failed item per lane before moving to the next one.
- Leave Bag A standing open where it is. Do not fold, close, or move it.

Check: both lanes of Crate 1 are empty, including its base and corners. Bag A holds all six Crate 1 groceries, with the four non-fragile below and the two fragile side by side on top, nothing above them, and the contents below the bag rim. Bag A still stands open in its marked position.

Step 2: Pack the Crate 2 groceries into Bag B

Goal: all six groceries in Crate 2 are packed into Bag B the same way, with the arm roles mirrored.

- With the **left gripper**, hold Bag B open at a clear upper edge, handle, or side, reaching in from the left and keeping that hold throughout loading.
- With the **right gripper**, perform Steps 1.1 through 1.4 drawing only from **Crate 2**, non-fragile lane first and fragile lane second.
- Move and place exactly one grocery at a time.
- Do not disturb packed Bag A or reach into Crate 1.
- Leave Bag B standing open where it is. Do not fold, close, or move it.

Check: the same conditions as Step 1, for Crate 2 and Bag B.

Step 3: Return to home and end the episode

- Move both arms back to the home position with grippers open.
- Hold the final scene stable for 3 seconds.
- End data collection only after both arms are fully home.

Expected end state: all twelve groceries are bagged, six in each bag. Both crates are empty and stable in their marked positions with labels visible. Both bags stand upright and open where they were packed, fragile groceries on top, contents below the rim. No package is open, leaking, or crushed and no produce is visibly bruised.

After the episode: reset the workspace

Check the completed task

- Both bags packed: all twelve manifest groceries are bagged, six per bag, both bags stand upright and open in their marked positions, both crates are empty, and both arms are home.
- If the task stopped because of a Critical violation or non-violation failure, quarantine the affected grocery or equipment and follow the data-pipeline rule before resetting.

Reset the workspace

This part is not recorded. It is just how you reset the table for the next session. With recording off:

- Return every grocery from both bags to its crate.
- Inspect every grocery and replace any package or produce item that is damaged, leaking, bruised, or spoiled.
- Replace any bag that no longer stands open on its own or has a torn handle or wall.

- Select the next approved twelve-item set from the data-collection coverage plan and create its session manifest.
- Assign each item a handling class, and record every item's class, handling attributes, and the six-item count in each crate.
- Load the Bag A groceries into Crate 1 and the Bag B groceries into Crate 2, four to the non-fragile lane and two to the fragile lane in each.
- Confirm each crate's two fragile items can sit side by side in one bag layer, and that each bag can hold its six groceries with the contents below the rim.
- Vary the item types, package types, size, shape, weight, and lane arrangement according to the coverage plan, keeping the four-plus-two lane counts fixed.
- Stand Bag A open and empty in its marked center-left position, beside Crate 1, and Bag B open and empty in its marked center-right position, beside Crate 2.
- Return Crate 1 to the left side and Crate 2 to the right side with labels facing the camera.
- Remove all unrelated objects from the table.

Reverify setup

Run through the Setup checklist again before starting the next episode.

SOP violations

These are the things that break (violate) the SOP. This list feeds the violation set and is what reviewers look for using the side-by-side review tool.

How to record a violation in review

For each violation you spot in a recorded episode, record:

- The start timestamp of the violation in the video.
- The violation name from the list below.
- The SOP rule broken (the step number from the list below).

The visible cue is what you actually see in the video. The coaching note is for retraining after the review; it is not what the annotator labels.

Episode handling

Any SOP violation is flagged (or tagged) with the timestamp and violation name. Rather than being discarded, the episode is retained in the training data and tagged with the violation. No flagged episode is deleted. This matches the goal of capturing realistic variance in training.

Violations

A Critical violation should be flagged or tagged with the timestamp and name; episode handling follows the applicable data-pipeline rule.

Violation: Unsafe or unsupported grocery included (Critical).

- **Visible cue:** the episode starts or continues with an item that is hot, open, leaking, sharp, hazardous, contaminated, outside validated mass or size limits, or unable to fit through the crate or bag opening.
- **SOP rule broken:** Steps 1 and 2, only groceries that pass the acceptance criteria are packed.
- **Coaching note:** remove or replace the item during recording-off setup; never test an unvalidated grocery in a recorded episode.

Violation: Bag B started before Bag A was complete.

- **Visible cue:** Crate 2 or Bag B is touched or loaded before all six Crate 1 groceries are in Bag A.
- **SOP rule broken:** Steps 1 and 2 (complete Bag A before starting Bag B).
- **Coaching note:** finish packing Bag A before touching Crate 2.

Violation: Grocery taken from the wrong crate.

- **Visible cue:** an item from Crate 2 is loaded into Bag A, an item from Crate 1 is loaded into Bag B, or a gripper reaches into the crate not assigned to the active bag.
- **SOP rule broken:** Steps 1.1 and 2, Crate 1 packs into Bag A and Crate 2 packs into Bag B.
- **Coaching note:** draw only from the crate assigned to the bag being packed.

Violation: Layer order not followed.

- **Visible cue:** a fragile grocery is loaded before all four non-fragile items are in the bag, or an item is drawn from a lane out of turn.
- **SOP rule broken:** Steps 1.1 and 1.4 (empty the non-fragile lane, then the fragile lane).
- **Coaching note:** clear the whole non-fragile lane before touching the fragile one.

Violation: Fragile grocery not left on top or loaded under weight (Critical if the item is damaged).

- **Visible cue:** a fragile grocery ends up below the non-fragile layer, stacked under the other fragile item, pressed against the bag wall, or with any item resting on it.
- **SOP rule broken:** Step 1.3 and the Step 1.4 fragile layer check (fragile groceries side by side on top of the non-fragile layer with nothing above them).
- **Coaching note:** keep the fragile layer flat and single, and load nothing after it.

Violation: More than one grocery handled at once.

- **Visible cue:** the gripper traps, lifts, carries, or releases two or more groceries together.
- **SOP rule broken:** Steps 1 and 2, pack one grocery at a time.

- **Coaching note:** isolate one accessible grocery and complete its placement before selecting another.

Violation: Wrong arm used for an action.

- **Visible cue:** Bag A is loaded by the right gripper or held by the left; Bag B is loaded by the left gripper or held by the right; or the holding gripper lifts a grocery.
- **SOP rule broken:** Steps 1 and 2, each arm loads from the crate on its own side and the opposite arm holds the bag.
- **Coaching note:** left loads Bag A and right holds it; right loads Bag B and left holds it.

Violation: Active bag not held open during loading.

- **Visible cue:** the holding gripper releases the bag while a grocery is being lowered, the bag collapses, tips, or closes around an item, or the holding gripper blocks the loading path across the bag mouth.
- **SOP rule broken:** Steps 1 and 2 (hold the bag open throughout loading and keep the holding gripper clear of the mouth).
- **Coaching note:** keep the hold until each item is supported, and hold from the edge rather than over the opening.

Violation: Other crate, other bag, or packed bag disturbed.

- **Visible cue:** the crate or bag not in use is nudged, shifted, or reached over before its turn; a lane is dug through or mixed; a crate shifts, tips, or has its label obscured; or a packed bag is nudged, toppled, or unloaded.
- **SOP rule broken:** Steps 1.1 and 2 (leave the other side untouched until its turn and preserve completed work).
- **Coaching note:** take the top accessible item from the current lane and route both arms clear of everything else.

Violation: Delicate feature used as the primary grasp.

- **Visible cue:** a grocery is lifted by a cap, lid, seal, thin film, unsupported package corner, or produce stem.
- **SOP rule broken:** Step 1.2 (use a secure body grasp).
- **Coaching note:** grasp a stable body area that will not open, tear, leak, or bruise.

Violation: Excessive grip force or grocery damage (Critical if leaking or broken).

- **Visible cue:** packaging dents or opens, produce bruises, a fragile item compresses, glass breaks, or liquid leaks.
- **SOP rule broken:** Step 1.2, use the minimum secure force and a light grip on fragile groceries.

- **Coaching note:** reduce grip force, choose a stronger grasp area, and stop if a package leaks or breaks.

Violation: Grocery reoriented in the air.

- **Visible cue:** the gripper turns, tips, or rolls a grocery while it is off the crate instead of setting it down and regrasping.
- **SOP rule broken:** Steps 1 and 2, set the item flat in its lane, release, and regrasp to change orientation.
- **Coaching note:** put the item back in its lane before changing your grip.

Violation: Grocery dragged, snagged, or forced into the bag.

- **Visible cue:** an item scrapes the crate rim or table, catches a handle or fold, or is pushed past an item already in the bag.
- **SOP rule broken:** Step 1.3, lift clear of the crate and lower through a clear bag mouth.
- **Coaching note:** reopen the bag, choose a clear path, and lower without force.

Violation: Grocery dropped or collision during transport.

- **Visible cue:** the grocery falls or strikes a crate, bag, work surface, robot, or another grocery.
- **SOP rule broken:** Steps 1.2 and 1.3 (stable grasp and a level carry along a clear path).
- **Coaching note:** confirm the hold before transport and maintain clearance.

Violation: Grocery released before it is supported.

- **Visible cue:** an item is dropped into the bag from above the mouth, released while still leaning on the gripper, or left rocking on the layer below.
- **SOP rule broken:** Steps 1 and 2, release only once the item is supported.
- **Coaching note:** lower to a supported space and confirm the item settles before opening the gripper.

Violation: Non-fragile layer left unlevel.

- **Visible cue:** a non-fragile grocery is left standing on edge, rocking, or pressing the bag wall outward, and the fragile layer is loaded onto it anyway.
- **SOP rule broken:** Step 1.4 non-fragile layer check (seat every non-fragile item flat and level before starting the fragile lane).
- **Coaching note:** seat the platform flat first — the fragile pair has to sit on it.

Violation: Leak-prone grocery left unstable.

- **Visible cue:** a bottle, carton, cup, or similar container is packed on its side, inverted, leaning, or unsupported.

- **SOP rule broken:** Steps 1 and 2, keep leak prone groceries upright from lift through release.
- **Coaching note:** preserve upright orientation and confirm stability before retracting.

Violation: Retry limit exceeded.

- **Visible cue:** a grocery is regrasped more than once after an unstable hold, more than one item is reseated in the same lane, or the same pick or placement is reattempted repeatedly.
- **SOP rule broken:** Step 1.2 (one deliberate re-grasp) and Step 1.4 (reseat one failed item per lane).
- **Coaching note:** improve the first approach and stop the episode after the allowed recovery fails.

Violation: Crate left unemptied or bag count wrong.

- **Visible cue:** a grocery remains in a lane, crate corner, or crate base, or the bag holds other than its crate's six groceries, when the episode moves on to the other crate or to home.
- **SOP rule broken:** Steps 1 and 2 and their checks (empty both lanes of the crate; six groceries per bag, four non-fragile and two fragile).
- **Coaching note:** clear every lane and corner, and count the bag against its crate, before leaving a crate.

Violation: Bag overfilled or rim clearance missing.

- **Visible cue:** an item protrudes above the bag rim, leans on it, or is forced in once the bag is full, and the episode continues without it being corrected.
- **SOP rule broken:** Steps 1 and 2 (keep the packed contents below the bag rim).
- **Coaching note:** seat each item down into the bag and stop loading a bag that is full.

Violation: Packed bag folded, closed, or moved.

- **Visible cue:** a bag is folded shut, tipped, lifted, slid, or repositioned at any point, or the episode ends with a bag away from its marked position.
- **SOP rule broken:** Steps 1 and 2 (leave each packed bag standing open where it was packed).
- **Coaching note:** the task ends at packed — do not close or carry the bags.

Violation: Incorrect episode ending.

- **Visible cue:** the final frames show a grocery left in a crate or on the table, a grocery in the wrong bag, a bag holding other than its crate's six items, or a bag fallen, overfilled, or moved from its marked position; or recording ends with either arm visibly off home, either gripper closed, or without the 3-second stable hold on the final scene.

- **SOP rule broken:** Step 3 (expected end state, then both arms home with grippers open and a 3-second hold before ending).
- **Coaching note:** leave every grocery in its own crate's bag and both bags standing as packed, then complete the home motion and the hold before ending recording.

Non-violation failures

These are episode failures that are not caused by how the task was run and do not go in the violation set. They are recorded as system issues, the episode is discarded or deleted, and the episode does not become a coaching point.

- **Recording stopped or paused mid-episode:** software or hardware issue with the recording system.
- **Camera dropped frames or lost feed during the episode:** camera or capture-system issue.
- **Hardware fault on the robot arm:** gripper malfunction, arm-position drift, or motor error during the episode.
- **Defective grocery:** an item was already leaking, spoiled, damaged, or mislabeled through no fault of the way the task was run.
- **Defective bag:** a bag was already torn, wet, or unable to stand open and hold its shape as specified, or it collapsed under a correctly placed grocery.
- **Defective crate or label:** a crate collapsed or a label detached without a gripper touching it.
- **Incorrect supplied manifest:** the controlled manifest contained a wrong item identity, handling class, handling attribute, or expected count through no fault of the way the task was run.

Annotation subtasks (from SOP)

1. Pack the Crate 1 non-fragile layer into Bag A
2. Pack the Crate 1 fragile layer into Bag A
3. Pack the Crate 2 non-fragile layer into Bag B
4. Pack the Crate 2 fragile layer into Bag B
5. Return both arms home and end the episode
